

The PYCBC package and its use in the search of the Gravitational waves detection

Its application in GPUs

GPU Day 2016 - The Future of Many-Core Computing in
Science

Abstract

In the last year, the first signal of gravitational waves were detected by the LIGO-Virgo group. A hungarian collaboration will join the examination of the data during Observation Run 2 (O2) of the Advanced detectors LIGO-Virgo. The PYCBC and its GPU application will provide a valuable contribution in this purpose. In our talk we introduce these possibilities.

PYCBC

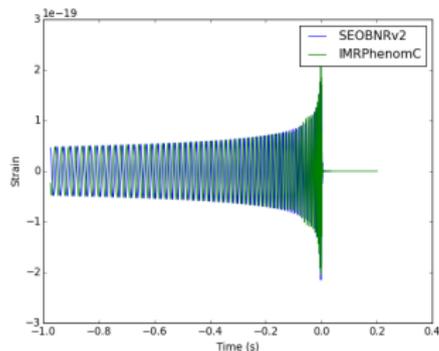

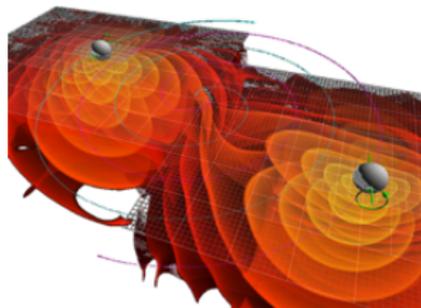

PYCBC

- Python software package for GW data analysis

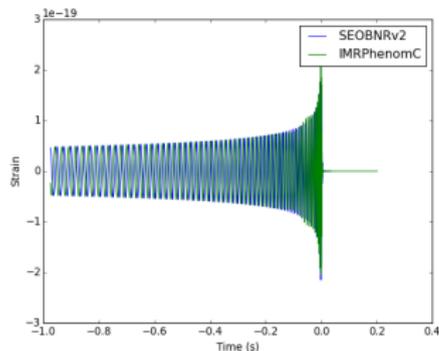

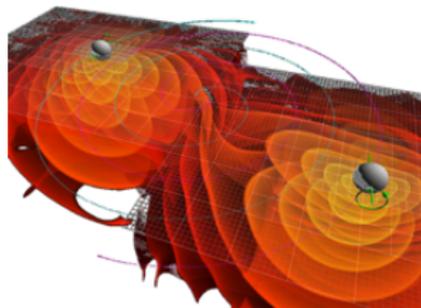

PYCBC

- Python software package for GW data analysis
- Searching for inspiralling compact binaries:
 - matched filtering
 - post-Newtonian approximation
 - spinning components
 - IMR waveforms

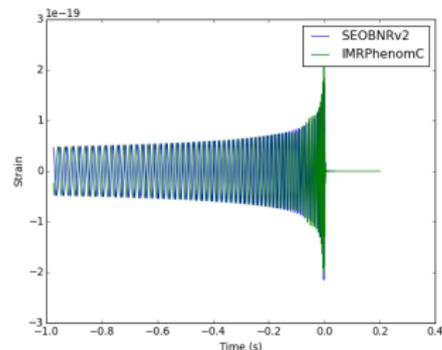

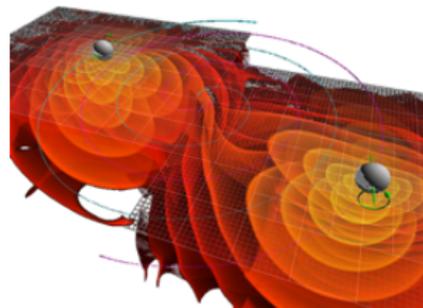

PYCBC

- Python software package for GW data analysis
- Searching for inspiralling compact binaries:
 - matched filtering
 - post-Newtonian approximation
 - spinning components
 - IMR waveforms
- Many core applications (CPU/GPU)

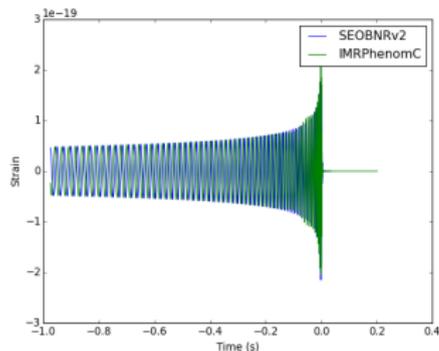

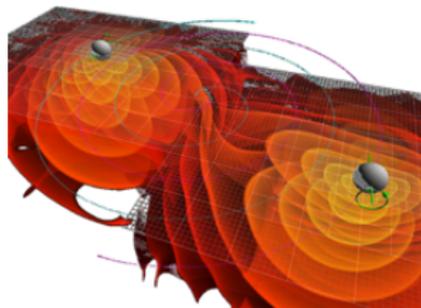

PYCBC

- Python software package for GW data analysis
- Searching for inspiralling compact binaries:
 - matched filtering
 - post-Newtonian approximation
 - spinning components
 - IMR waveforms
- Many core applications (CPU/GPU)
- Participation in the development

PYCBC

- Python software package for GW data analysis
- Searching for inspiralling compact binaries:
 - matched filtering
 - post-Newtonian approximation
 - spinning components
 - IMR waveforms
- Many core applications (CPU/GPU)
- Participation in the development
- Data analysis, parameter estimation

Data Processing

- Participation in the development of the interconnectivity between different Grid infrastructures:

EGI Grid ↔ OSG ↔ LDG

Data Processing

- Participation in the development of the interconnectivity between different Grid infrastructures:

EGI Grid ↔ OSG ↔ LDG

- The recorded scientific data (160 TB/year/IF) of the Interferometers has to be transferred, processed, analyzed, etc.

Data Processing

- Participation in the development of the interconnectivity between different Grid infrastructures:

EGI Grid ↔ OSG ↔ LDG

- The recorded scientific data (160 TB/year/IF) of the Interferometers has to be transferred, processed, analyzed, etc.
- Data analysis: Hannover, Bologna, Bp. and US clusters

Data Processing

- Participation in the development of the interconnectivity between different Grid infrastructures:

EGI Grid ↔ OSG ↔ LDG

- The recorded scientific data (160 TB/year/IF) of the Interferometers has to be transferred, processed, analyzed, etc.
 - Data analysis: Hannover, Bologna, Bp. and US clusters
- Development and implementation of search algorithms on GPUs (CUDA and OpenCL), which can be parallelized and/or independent calculations can be performed at the same time.

Data Processing

- Projects:

Data Processing

- Projects:
 - Compact binary coalescence search algorithms

Data Processing

- Projects:
 - Compact binary coalescence search algorithms
 - Continuous wave searches (F-statistics, Hough method)
